

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (*Currently Amended*) A method for transferring a process command from a wireless telecommunications device via inside a cellular telecommunications system, which comprises ~~comprising~~ at least two cells, each of which is controlled ~~covered~~ by a base station that recognizes ~~recognizing~~ said wireless telecommunications device when active, to a some-terminal device coupled to ~~which is part of~~ a network, wherein at least one terminal device is located within each cell of said cellular communications system, said network is coupled ~~said terminal is related~~ to said cellular telecommunications system through at least a computer, said method comprising:

generating said process command on said wireless telecommunications device for said transfer;

transmitting a radio signal that communicates ~~related to~~ said process command from said wireless telecommunications device to one of said base stations;

forwarding at least part of said process command from said base station to said computer;

applying ~~some~~ rules at on said computer to select a said-terminal device resident in the being in a same cell controlled by of said cellular telecommunications system as said base station that which received said radio signal, said terminal device located in the same cell as said wireless telecommunications device at the time said process command was generated; and

performing at least part of said process command on said terminal device.

2. (*Currently Amended*) The method for transferring a process command according to claim 1, wherein, if a plurality of terminal devices are resident in a cell, ~~characterized in that the~~ selection of said terminal device is performed by a user of said wireless telecommunications device using a ~~with the help of a restricted list of~~ all terminal devices resident ~~terminals being all~~ in said ~~same~~ cell.

3. (*Currently Amended*) The method for transferring a process command according to claim 1, wherein ~~characterized in that~~ said process command concerns an activation of a print of ~~some~~ data accessible via said wireless telecommunications device.

4. (*Currently Amended*) The method for transferring a process command according to claim 3, wherein ~~characterized in that~~ said terminal device is a printer.

5. (*Currently Amended*) The method for transferring a process command according to claim 3, wherein ~~characterized in that~~ said terminal device is a monitor on which is displayed said print.

6. (*Currently Amended*) The method for transferring a process command according to claim 1, wherein ~~characterized in that~~ said process command concerns a transfer of a telecommunications connection to said terminal device.

7. (*Currently Amended*) The method for transferring a process command according to claim 6, ~~wherein characterized in that~~ said terminal device is at least in part a telephone.

8. (*Currently Amended*) A wireless telecommunications device ~~that accesses inside a~~ cellular telecommunications system, said wireless telecommunications device comprising ~~containing a~~ programming code generating a process command to be transferred from said wireless telecommunications device to said terminal devices ~~some terminals~~ following ~~the a~~ method according to claim 1.

9. (*Currently Amended*) A computer connected to a network comprising at least two different ~~terminal device~~ terminals, said computer connected to a cellular telecommunications system comprising a plurality of base stations, each of which controls a cell, wherein each of ~~which is inside a cell~~ has at least one terminal device located within its coverage area ~~covered by a different base station of a cellular telecommunications system to which is also connected said computer, wherein said computer comprises~~ containing processing means activated when receiving at least part of a process command generated on a wireless telecommunications device accessing inside ~~said~~ cellular telecommunications system, said processing means selecting a terminal device located ~~performing a selection between said terminals for finding said terminal, being in the same cell as said wireless telecommunications device at the time said process command was generated on the wireless telecommunications device, and~~ forwarding toward

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. APPLICATION NO. 09/875,890
ATTORNEY DOCKET NO. Q64615

~~which subsequently~~ at least part of said process command to said selected terminal device ~~is sent~~.

10. (*Currently Amended*) The computer according to claim 9, wherein ~~characterized in~~
~~that~~ said processing means is part of a messaging system.
